Lenovo Group ("Lenovo" or the "Company") is focused on a bold vision to deliver smarter technology for all and is developing world-changing technologies that power and empower millions of customers every day and together create a more inclusive, trustworthy, and sustainable digital society for everyone, everywhere. Lenovo regards sustainable development as a priority in its business operations.

**Lenovo’s Sustainable Development Overview**

Innovation
The Company has developed a robust ESG management system and strategy, and actively promotes sustainable development initiatives. To allow accountability and transparency at the highest levels of the organization, the Company has established a robust ESG governance structure comprised of senior management of Lenovo, ensuring the Board has the highest level of oversight for ESG programs.

Lenovo has continued its role as a signatory supporter to the United Nations Global Compact (“UNGC”), a globally recognized platform that provides a blueprint for businesses that want to achieve a more sustainable future for all. As a business participant in the UNGC, the Company strives to demonstrate continuous improvements as it aligns operations and practices with the ten principles of the UNGC. The principles promote a value system that supports the fundamental responsibilities in the areas of human rights, labor, environment, and anti-corruption. The initiatives aligned with the UNGC and combined with Lenovo’s wide array of other commitments toward the environment and society, contribute to the United Nations Sustainable Development Goals.
Recognizing the potential risks of climate change, Lenovo is fully committed to carbon footprint reduction in its operations. To this end, the Company has set a vision of achieving net-zero by 2050 and has signed the Science Based Targets initiative Commitment Letter in March 2022 pledging to set net-zero targets including a long-term science-based target by aligning with 1.5°C and net-zero through the Business Ambition for 1.5°C campaign.

Lenovo fosters energy efficiency and renewable energy. For example, from an innovation perspective, the Neptune liquid cooling technology, combined with the High-Performance Computing cluster, helps data center customers become more energy efficient. Meanwhile, the Company has continued to expand the renewable energy installation. The total in-operation renewable energy capacity in the worldwide locations has currently reached approximately 17MW as of FY 2021/22, with more in the plan.

Furthermore, Lenovo has been promoting resource preservation and supporting a circular economy by increasing the use of recycled and recyclable materials in packaging, increasing the use of bio-based materials, reducing the size of packaging, and expanding the use of bulk and reusable packaging solutions. For example, since 2012, the Company has been using bamboo fiber in packaging, a renewable, bio-based and lightweight material.

To build a more diverse, equitable and inclusive workplace, Lenovo has set the target to increase global female executive representation to 27% and executives from historically underrepresented ethnic and racial groups in the US to 35% by FY 2025/26. The Company is committed to the United Nation’s Women’s Empowerment Principles to further promote gender equality in the organization, marketplace and communities. Meanwhile, Lenovo’s Product Diversity Office works with inclusive design experts and will review 75% of Lenovo products by 2025 to ensure they work for everyone, regardless of physical attributes or abilities.
The Company believes technology connects people, enables productivity, and creates possibilities. Therefore, it must be inclusive and accessible to all, especially those most in need of it. In light of this, Lenovo has continued to respond to waves of the COVID-19 outbreaks globally. In addition, Lenovo supports science, technology, engineering, and math (STEM) education to drive positive change. The Company has a goal of committing a minimum of 0.5% of its pretax income to global social investment programs and initiatives.

For more details and the latest information about sustainability at Lenovo, please view the Company’s annual Environmental, Social and Governance Report and the Company’s website (Link).
Lenovo strives to integrating sustainability elements into the financing mechanism. In light of this, the Company established its Green Finance Framework (the “Framework”) (Link) in July 2022 to set out the governance and processes under which the Company intends to issue Green bonds and loans. The Framework was established with core pillars in alignment with the Green Bond Principles 2021 by the International Capital Market Association (“ICMA”), and the Green Loan Principles 2021 by the Loan Market Association (“LMA”), the Asia Pacific Loan Market Association (“APLMA”), and the Loan Syndications and Trading Association (“LSTA”). The Framework has obtained a Second Party Opinion from Sustainalytics (Link).

The net proceeds raised under the Framework will be used to finance or refinance, in whole or in part, expenditure on eligible green projects that are related to energy efficiency, renewable energy, green buildings, circular economy adapted products, production and processes, and clean transportation. Fostering investment in eligible green projects, the Framework supports the transition to a low-carbon and more resource efficient business operation, thereby echoing Lenovo’s sustainable development strategies and the commitment to decarbonisation.

As of end of October 2022, Lenovo has issued the following green financing instrument:

<table>

² Lenovo collects the renewable energy production data in a software application on biennial base.
³ The emissions avoided by the renewable energy produced are calculated as per the US Environmental Protection Agency Emissions & Generation Resource Integrated Database (eGRID).
⁴ As the Shenzhen Headquarter is a joint venture project, the floor area only includes the Lenovo part.
Case Highlight

Location
Zhongguancun Software Park, Beijing

Green Building Certification
LEED Gold Certification

Description
Located in the Zhongguancun Software Park, where a cluster of Chinese tech giants are located and altogether form the “Silicon Valley” of China, the campus can accommodate more than 10,000 of global technology workers. For construction, the Company employed only materials that are low in harmful substances, and it gave preference to materials from natural sources.

The core virtue of the design is openness, fostering accessible public amenity spaces for the community. Featuring modern technology and sustainable design, the campus provides an environment with multiple collaboration and meeting spaces with flexible, advanced lighting technology and many other amenities for Lenovo staff and partners, aiming to inspire collaboration, foster relationships, and enhance teamwork. The new campus also includes publicly accessible lifestyle amenities and living facilities, such as a rock-climbing wall, coffee shop, bookstore, restaurant, brand showroom, convenient laundry room, gym, child care center and other living facilities.
Highlight of Green Features
The campus incorporates various green features to promote sustainability, such as:

**Energy Efficiency**
- Design allowing daylight to reach building interiors
- Automated window systems enabling passive ventilation
- Smart overhead lights with the Infrared sensors sense

**Renewable Energy**
- Solar panels on top of the building to provide energy
- Geothermal heat pumps supporting the centralised heating system

**Water Conservation and Management**
- Rainwater collection and storm water retention
- Permeable pavement
- Graywater recycling
Appendix, Sustainalytics Review
Lenovo Group Limited

Type of Engagement: Annual Review
Date: December 07, 2022
Engagement Team:

Introduction

In July 2022, Lenovo Group Limited (“Lenovo”) developed the Lenovo Group Limited Green Finance Framework (the “Framework”) 1 aimed at financing and refinancing projects related to i) Energy Efficiency, ii) Renewable Energy, iii) Green Buildings, iv) Circular Economy Adapted Products, Production and Processes, and v) Clean Transportation and subsequently issued a green bond of USD 625 million. In November 2022, Lenovo engaged Sustainalytics to review the projects funded with proceeds from the 2022 green bond and provide an assessment as to whether the projects met the Use of Proceeds criteria and the reporting commitments outlined in the Framework. Sustainalytics provided a second-party opinion2 on the Framework in July 2022.

Evaluation Criteria

Sustainalytics evaluated the projects and assets funded with proceeds from the 2022 green bond based on whether the projects and programmes:

1. Met the use of proceeds and eligibility criteria outlined in the Lenovo Group Limited Green Finance Framework; and
2. Reported on at least one of the Key Performance Indicators (KPIs) for each Use of Proceeds category outlined in the Lenovo Group Limited Green Finance Framework.

Table 1: Use of Proceeds Category, Eligibility Criteria and Associated KPIs

<table>
<thead>
<tr>
<th>Use of Proceeds Category</th>
<th>Eligibility Criteria</th>
<th>Key performance indicators (KPIs)</th>
</tr>
</thead>
</table>
| Renewable Energy         | Investments related to the construction, operation, and procurement (long-term, project-tied power purchase agreements) of renewable energy sources: | ▪ Annual renewable energy generation (MWh or GJ)  
                          |  
                          | ▪ On-site or off-site solar energy projects |  
                          | ▪ Offshore and onshore wind energy |  
                          | ▪ Biofuels and biogas projects3 | ▪ Annual GHG emissions reduced/avoided (metric tonnes of CO2 equivalent) |
| Green Buildings          | Investments related to the construction, renovation, and retrofitting of new or existing buildings/facilities that have received at least one of the following third-party green building certifications: | ▪ Number of green buildings constructed/renovated  
                          |  
                          | ▪ China Green Building Evaluation Label – 2 stars or above |  
                          | ▪ BEAM Plus – gold or above |  
                          | ▪ U.S. Leadership in Energy and Environmental Design (LEED) – gold or above |  

---

3 Lenovo commits to limit financing biofuels and biogas projects to those with a life cycle GHG emissions intensity below 100 gCO2e/kWh. In addition, Lenovo will ensure that non-waste feedstocks are sustainably sourced using credible third-party certifications (i.e. Roundtable for Sustainable Biomaterials, ISCC EU/PLUS, 2BSys, Round Table on Responsible Soy, BONSUCRO, FSC, PEFC), subject to exclusion of peat, palm oil, non-certified oil and energy crops. In addition, waste feedstocks projects will be limited to those using forestry and agricultural residues as feedstock, subject to exclusion of waste from non RSPO or RSPO-certified palm oil operations.

© Sustainalytics 2022
Issuing Entity’s Responsibility

Lenovo is responsible for providing accurate information and documentation relating to the details of the funded projects, including description of projects, amounts allocated and project impact.

Independence and Quality Control

Sustainalytics, a leading provider of ESG research and ratings, conducted the verification of use of proceeds from Lenovo’s Green bond. The work undertaken as part of this engagement included collection of documentation from Lenovo and review of said documentation to assess conformance with the Lenovo Group Limited Green Finance Framework.

Sustainalytics relied on the information and the facts presented by Lenovo. Sustainalytics is not responsible nor shall it be held liable for any inaccuracies in the opinions, findings or conclusions herein due to incorrect or incomplete data provided by Lenovo.

Sustainalytics made all efforts to ensure the highest quality and rigor during its assessment process and enlisted its Sustainability Bonds Review Committee to provide oversight of the review.

Conclusion

Based on the limited assurance procedures conducted,4 nothing has come to Sustainalytics’ attention that causes us to believe that, in all material respects, the reviewed projects do not conform with the use of proceeds and reporting criteria outlined in the Lenovo Group Limited Green Finance Framework. Lenovo has disclosed to Sustainalytics that the proceeds from the green bond were fully allocated as of October 2022.

4 Sustainalytics limited assurance process includes reviewing the documentation relating to the details of the funded projects, including description of projects, estimated and realized costs of projects, and project impact, as provided by the Issuer, which is responsible for providing accurate information. Sustainalytics has not conducted on-site visits to projects.
Appendices

Appendix 1: Allocation Reporting by Eligibility Criteria

As of October 2022, Lenovo has allocated 100% of the net proceeds as follows: i) USD 8.1 million (1.3% of the proceeds) in the renewable energy category, and ii) USD 616.9 million (98.7% of the proceeds) in the green buildings category. The table below provides a detailed breakdown of the allocation of net proceeds.
